The NSW Office of the Chief Scientist & Engineer

I'm not quite sure what or whom I'm writing to. The days where people spoke with or to one another appear to have disappeared. It seems, anyone that operates at any tier of Government, seem so shite scarred of the public, they all generally hide behind their corporations. That is only false at best and no protection at worst.

Having cleared that from my chest, my contribution to this alleged community discussion concerning the Coal Seam Gas operations and mining will seem extraordinarily biased because of what I have personally seen and seen 3rd hand.

Mr/Mrs/Ms Office of the Chief Scientist & Engineer. With all of the overwhelming world evidence re: the effects of and the state of the CSG mining and industry, is there really any need for input from any elements of society. The effects on the environment, the earth, livestock, forest animals, people and the air because of the industry is indisputable to the extent a blind rabbit knows the effects by the contamination in the air and groundwater supply.

Is your office simply mocking the general population of New South Wales by it an opportunity to contribute to an already known effect of the operations of the CSG industry, or are you compelled to ask the community to make it appear on the face that the community's input is a concern to government when every tier of government has usually ignored the will of the people and for a long long time.

Mr/Mrs/Ms Office of the Chief Scientist & Engineer. Why don't you simply search for 'effects of CSG mining in the USA' to see the devastation it has left upon the continent, its ground water, air, land, ecosystem, animals and people.

Do you really believe;

people here in Australia are so stupid as to be ignorant of the effects of the CSG mining industry around Australia and the world?

do you really believe you won't be held accountable personally one day for your part and contribution in supporting the industry, if in fact you proceed to support it when you are aware of its impact against the community and ecosystem, the devastation the CSG industry causes every country this horrendous, deceitful, misleading, culpable, murderous industry is to any country?

do you really believe you and your children are safe and won't be effected by the industry if it is permitted to grow unabated?

Mr/Mrs/Ms Office of the Chief Scientist & Engineer, are mining profits more important to you than long term prosperity created from and of a healthy land, people, food supply, water supply, air supply, and country?

Mr/Mrs/Ms Office of the Chief Scientist & Engineer, you are all playing with FIRE because this is an issue that is grass roots, where many many people are angry and resentful for the damage already done by the industry. It's uniting the people across the country and the people are rising and they will fight. Maybe they'll fight to the death too because their livelihood, their health, their family their lands and their very lives are at stake and under the threat by Mr BIG CHINA and USA mining co. The battle lines are forming across the country
Mr/Mrs/Ms Office of the Chief Scientist & Engineer.

My last question is therefore, WHICH SIDE ARE YOU ON WHEN THE WAR BEGINS?

I hope you think very long, hard and deep, look into your soul Mr/Mrs/Ms Office of the Chief Scientist & Engineer because we, the people, have long memories for those that contribute to and cause harm to our children, our health and our country. I hope you find inner wisdom so you may seek peace and love with yourselves and with the current predominantly healthy community around you today.

Blessings and peace John Zanetic 27 March 2013
