SYDNEY.

Dear Sir,

Attached please find my submission on Coal Seam Gas Mining.

Yours sincerely,

Bev L. Pattenden. Submission on Coal Seam Gas.docx

27th March, 2013.

To the Chief Scientist & Engineer,
NSW Government.

Dear Sir Submission on Coal Seam Gas Activities.

Hereunder is a repeat of my email recently sent to Premier Barry O'Farrell, and other politicians with my thoughts on Coal Seam Gas Mining. Sometimes things are invented in the minds of men, which should never be implemented, because they will destroy the earth. Such an example is the injection of chemicals into the earth, using copious amounts of water, and fracking the coal seam to get unconventional gas. Are they using experimental nano technology to do this?

It takes wisdom to decide. Every person is responsible for the part they play in the preservation or the destruction of the planet.

You do not have to have a tertiary education to know that if you keep depleting the earth of all fossil fuels, coal and gas, and contaminate the underground water, it will result in sinkholes, earthquakes, famine and devastation. What good will all the money in the world be then? The love of money is the root of all evil.

"Are we on a path of self destruction? It would appear so.

Whenever and where-ever there is a \$dollar to be made, corporations will not stop. Because the mines are nearly all foreign owned, they will pack up and go home, when the gas and fossil fuels run out. Who is going to be accountable? They will be gone.

If mining is not controlled, it will result in quarries and mines all over the country, no good soil, no useable water and no food. Of course you know that, it is common sense, so why do you continue on this path?

Are you planning to move to another planet?

Eventually, one of the most beautiful cities in the world will be destroyed and those who approved these mines will have nowhere to hide.
