Hello Mary,

I am Bruce Derkenne's partner; you met with him and others yesterday representing the Manning. I was unable to attend as I work in Sydney.

I am the person that decided to "walk in unannounced" at AGL's head office a couple of months ago after the announcement that they were applying for the "go ahead" to frack at Gloucester. It was at this time we filmed our "discussion" with John Ross. http://www.youtube.com/watch?v=2_YurzVMAmw&feature=youtu.be

This was when we were told many of those extraordinary things about "salt in the Gloucester rainfall being similar or more, over the stage one area, than the volume of salt that would be brought to the surface in produced water" amongst other things.

There is plenty of data, as you are no doubt aware, that in fact this is incorrect by an error of about 35 times. This was by no means the only 'rubbery' information which was dished up to us. I can furnish you with many the references that contradict Ross' assertions on this and other matters. Hardly instils any degree of trust or respect, I must say...

In fact I could forward to you the email exchange with AGL which ensued following this and other subsequent "visits" to AGL if you are interested?

There are 'our questions' and 'AGL's answers' in a fairly succinct manner as generated by the aforementioned encounters.

Let me know if you'd like all this forwarded and I will do so.

To identify myself better, I am the person who moreorless started the daily 'occupation' outside AGL at Miller Street (which is now running into its second month) and then also the larger "Farewell AGL" Party which apparently you happened upon on Monday 9th Dec.

I am including here some new evidence about 'why CSG should not be happening'.....anywhere at all.....in case you haven't seen it yet:

"This is a urine test done on a 4 year old Australian boy who is having a gasfield built around him. He suffers central nervous system toxic effects. Hippuric acid, an indicator of toluene, is close to the max level permitted for an adult male worker. He is at least 1/4 the body weight of an adult male. The sample was taken 7 hours after leaving his home where he is exposed 24/7 to gasfield air pollution. The Health Department dismissed this test and would not follow up with more. He is still living in the gasfield with worse air pollution than when the test was done. He is surrounded by venting wells emitting gas and gas concentrate, pipes, flares, compressor stations, water treatment plants, diesel, noise, soot, light and vibration." See attached pic.

Thanks for your time.

Jennifer Schoepple

REPORT OF ANALYSIS

EMPLOYEE'S NAME: **[REDACTED]**
NAME OF EMPLOYER: **Not Stated**
TYPE OF SAMPLE: **I-Urine**

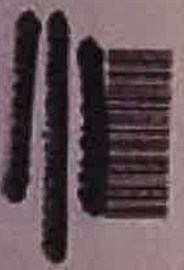

DATE OF BIRTH: **05/05/2009**
DATE OF COLLECTION: **12/12/2012**
DATE OF RECEIPT: **14/12/12**

Samples Analyzed as Received.

X44 (Bodyweight Reconstruction) = 2996

	Result	BOEL	Units	D.L.E
Toluene/Xylene Exposure				
Hyppuric Acid in Urine	749	1010	mmol/mol creatinine	
Toluic Acid in Urine	ND	650	mmol/mol creatinine	

Uriney Creatinine	Result	Units
Creatinine	0.718	g/L
Creatinine (SI Units)	0.0069	mol/L

INDY: Not Detected
D.L.E: Date of Last Exposure
Date of Last Exposure is reported above only when stated on the request form.
