Chief NSW Scientist and Engineer

Independent Review of Coal Seam Gas Activities

Dear Sir/Madam,

Please find our submission in response to your review of Coal Seam Gas (CSG) Activities in New South Wales (NSW). We are Landholders on the unique and productive Liverpool Plains and surrounding slopes.

Recommendation: There is to be no harm to our underground water, reduction to agricultural production, our health and the environment resulting from any CSG activities.

Our water, health and environment need to be protected, there is no second prize, we cannot replace what we have today and to justify this destructive industry in anyway is unacceptable. A short term profit for such loss makes no sense.

Yours Faithfully,

  
Andrew and Helen Strang
