The review has to help stop this inevitable horrendous environmental disaster from happening. Water extraction and hydraulic fracturing will definitely impact our environment , water and health of us all. Chemicals are the base line for their operation and environment is low on priorities. The process floods our land with chemicals. Pollution of our water will definitely happen, if Coal Seam Gas mining is approved. Legislation to stop any Coal Seam Gas Mining (Fracking)in Australia should happen now. Not have reviews.

It is disastrous to our country. Our soldiers went to war to save Australia and now our politicians are ruining it from within, all for money! What good is money if our land, water, health and our beautiful environment is destroyed.

Davina Riihimaa.
