To the NSW Chief Scientist

I write to request only truly independent information sources be used or commissioned in developing your fact sheets for the CSG report to be presented in July 2013.

I also urge you to afford grave consideration to any and/or all impacts of CSG activities for both community health and environmental sustainability.

Of many detrimental impacts, two cause major concern:

- \*the results of fracking processes on fragile river systems
- \*detrimental impact on water supply catchment tables

With thanks for your time
