Subject: CSG Mining

Thank you for allowing this extra time and patience for the most contentious exercise to be aired and properly sorted.

It is indeed with all good science that i hasten to add my learned response too this debate.

With the soundest advice gleaned from observing natural phenomena for sixty years,

it is with out reserved attack that i wish you all the problems that a good world can throw before you

and the resounding NO MINING loud and clear, rent the air of your dreams

Like your science your pockets are too big for commonsense.

ian
