Dear Professor O'Kane,

I would like to add our opinion to the review that is being undertaken.

We believe it is extremely foolish to rely on industry information to determine whether CSG will have adverse effects on the environment and the water table. Too many times have we seen things go ahead and the damage is done before anyone realises it.

Gloucester is a food production area with a pristine river system. To risk this is just not acceptable.

Please ensure totally independent sources of information are found or commissioned before allowing this to continue to expand in NSW. There is too much at stake.

Regards,  
Tracey Murrell & Barry McGregor
