Hi,

I am an Emeritus Professor of geology and a specialist in Sedimentology and Stratigraphy, ex Flinders University.

I am very concerned about the largely unknown impacts of coal seam gas drilling, fracking and extraction. I am concerned about the predictable impact on groundwaters, the impact on agriculture (prime farming land) and of course, I am very concerned about the fact that huge additional amounts of the greenhouse gases, CO2 And methane, would inevitably be emitted into the atmosphere.

Professor Chris vonderBorch

Former Dean of the School of Earth Sciences at Flinders University.
