Submission on the health and environmental impacts of coal seam gas

I wish to make a brief Submission on this issue.

Basically i am very concerned about the Coal Seam Gas industry, and its health and environmental effects.

: the impacts of coal seam gas activities on human health and the environment

There is much evidence both Australian and overseas off the terrible negative impacts on human health from CSG, not only for the workers at a plant. But also for the effects off gases into the atmosphere, water pollution in the sub-ground waterways, toxins, chemicals, slats etc.

Also the effects on the Natural Environment, clearing of habitat and loss of bio-diversity, and again, health affects on creatures and plant life, from gases, and poisoned waterways.

: request that the Chief Scientist seek out or commission truly independent sources of information in order to develop fact sheets so that she doesn't rely on industry information

Please see the CSG as an industry which does pollute and damage both health and the environment.

kind regards

Sean Corrigan
